

Lab work: MATLAB

- Consider matrix I :

0	0	1	4	4	5
0	1	3	4	3	4
1	3	4	2	1	3
4	4	3	1	0	0
5	4	2	1	0	0
5	5	4	3	1	0

- Threshold the matrix using the Within-Class Variance algorithm.
- Download the image from Week 4 (Moodle page). If necessary, use the best possible filter to remove the noise from the image, then threshold the image using the same thresholding algorithm.
